

MFi Authorized Third-Party Test Labs

Third-party testing by an authorized test lab is part of the MFi production-ready certification process for most accessories. Apple's third-party test facilities are authorized to perform TDMA testing and OTA (Over-the-Air) testing for MFi accessories. In addition, some labs are empowered to perform accessory compliance verification for certain accessories under the "One Touch" model. The services offered by each lab vary and are subject to change. This document provides contact information for each test lab and summarizes their available services at this time.

You may initiate third-party testing after your Product Plan is approved by Apple and you have submitted an ATS report. At the appropriate stage of certification, the Portal will prompt you to select an authorized test lab to perform any necessary third-party testing for your accessory. Please contact the selected lab directly for a quote and/or to schedule testing. For more information, please see the "Third-Party Testing" section of the Licensing Handbook.
